Portfolio: jasminephannd.github.io/portfolio

Professional Summary

Motivated Data Engineer with hands-on experience building and maintaining data pipelines using Python, SQL, Neo4j, and AWS. Holds a Master of Data Science and has practical experience transforming messy, real-world data into structured, ML-ready datasets, supporting analytics and machine learning workflows. Seeking a Data Engineer role where I can design scalable, reliable data systems, collaborate closely with domain experts, and contribute to data platforms that power decision-making.

Technical Skills

Programming & Querying:	Python, SQL, R
Data Engineering & Databases:	ETL Pipelines, Data Ingestion, Data Transformation, Data Quality Checks Neo4j (Cypher), MySQL, SQL Server, MongoDB, DynamoDB
Cloud & DevOps:	AWS, Azure, GCP, Git, Bitbucket
Analytics & BI:	Excel, Power BI, Tableau, SPSS

Professional Experience

Data Engineer

Apr 2025 – July 2026

Data Engineer Intern

Jan 2025 – Mar 2025

JurisTechne (Legal Tech Startup), Sydney NSW

- Built and maintained **Python-based ETL pipelines** processing **300,000+ legal documents** into analytics-ready and ML-ready datasets.
- Identified and resolved **40,000+ data quality and metadata inconsistencies**, improving dataset reliability and downstream processing accuracy.
- Automated document ingestion, parsing, and transformation workflows for legislation, case law, and regulatory content across multiple Australian jurisdictions.
- Enhanced legal data schemas to support accurate extraction and representation of penalties, definitions, legal entities, and hierarchical document structures.
- Developed graph database ingestion workflows using **Neo4j** and supported vector database integrations for AI-powered semantic search applications.
- Developed and maintained data processing workflows using **Python, Neo4j, and AWS**, supporting scalable storage, transformation, and retrieval of legal datasets.
- Collaborated with AI researchers and legal domain experts to align data models, ontologies, and business requirements.

Additional Experience

Casual Academic Tutor

Feb 2026 – Present

University of Technology Sydney

Understanding Data and Statistical Design (Postgraduate)

- Facilitate postgraduate data analysis and statistics workshops using **R**.
- Support students in statistical modelling, data interpretation, and coding.
- Assess assignments and provide structured academic feedback.

Education

Master of Data Science

Federation University (IIBIT Campus), Sydney NSW
Academic Commendation for Outstanding Academic Performance

Jul 2022 – Jul 2024

GPA: 6.833 / 7

Bachelor of Data Science

SP Jain School of Global Management, Sydney NSW
Awards: Dean's Lister (2019), Global Citizenship Award

Sep 2019 – Jun 2022

GPA: 3.58 / 4.15

Projects

HackerNews Data Engineering Pipeline

- Built an end-to-end ETL pipeline ingesting Hacker News data (Algolia API), orchestrated with Airflow and Celery on Docker Compose, using Redis and PostgreSQL for task management and scheduling.
- Staged cleaned data as CSV and loaded it into an Amazon S3 data lake, then transformed CSV to Parquet with AWS Glue and enabled SQL querying via Athena - a serverless analytics layer over S3.
- Configured Microsoft Teams notifications, sending automated success/failure alerts on each pipeline run.

Sales Performance Dashboard – Tableau

- Built two linked dashboards from a written requirements brief: a sales dashboard tracking sales, profit and quantity against the prior year, and a customer dashboard covering customer numbers, order distribution and top customers by profit.
- Designed the charts so patterns stand out without reading the numbers, with year selection and filters by product and location. Published at jasminephannd.github.io/sales_performance_dashboard

Personal Attributes

- Strong analytical and problem-solving skills, demonstrated through designing data pipelines and resolving data quality issues in production environments.
- Clear communicator, developed through regular collaboration with AI researchers, legal experts, and cross-functional teams.
- High attention to detail, essential for handling complex, compliance-sensitive datasets.
- Strong time management and reliability, demonstrated by balancing full-time work, professional year requirements, and technical projects.

Certifications

Associate Cloud Engineer – Google Cloud

2025 – 2028

AWS Certified Cloud Practitioner – Amazon Web Services

2022 – 2025

Introduction to Neo4j Graph Data Science – Neo4j

2025

Cypher Fundamentals – Neo4j

2025

SQL (Intermediate) – HackerRank

2022

Volunteering

YOW! Conferences, Sydney NSW - Event Volunteer

Dec 2024

- Supported attendee registration and conference operations for a large-scale technology event.

Vivid Sydney, Destination NSW – Guest Services & Way-Finding Volunteer

May 2023 – Jun 2023

- Assisted visitors and supported event operations during Australia's largest light, music, and ideas festival.
